Searching literature

SEARCH STRATEGIES **CREATE SEARCH QUERIES** **KEYWORDS/SUBJECT TERMS**

What are the key terms related to my topic?

What am I looking for?

What do I need this information for?

What is the goal of my work?

Can I find the information I need online?

What do I already know about the topic?

How comprehensive should the information be?

Which search tools are best suited to my search?

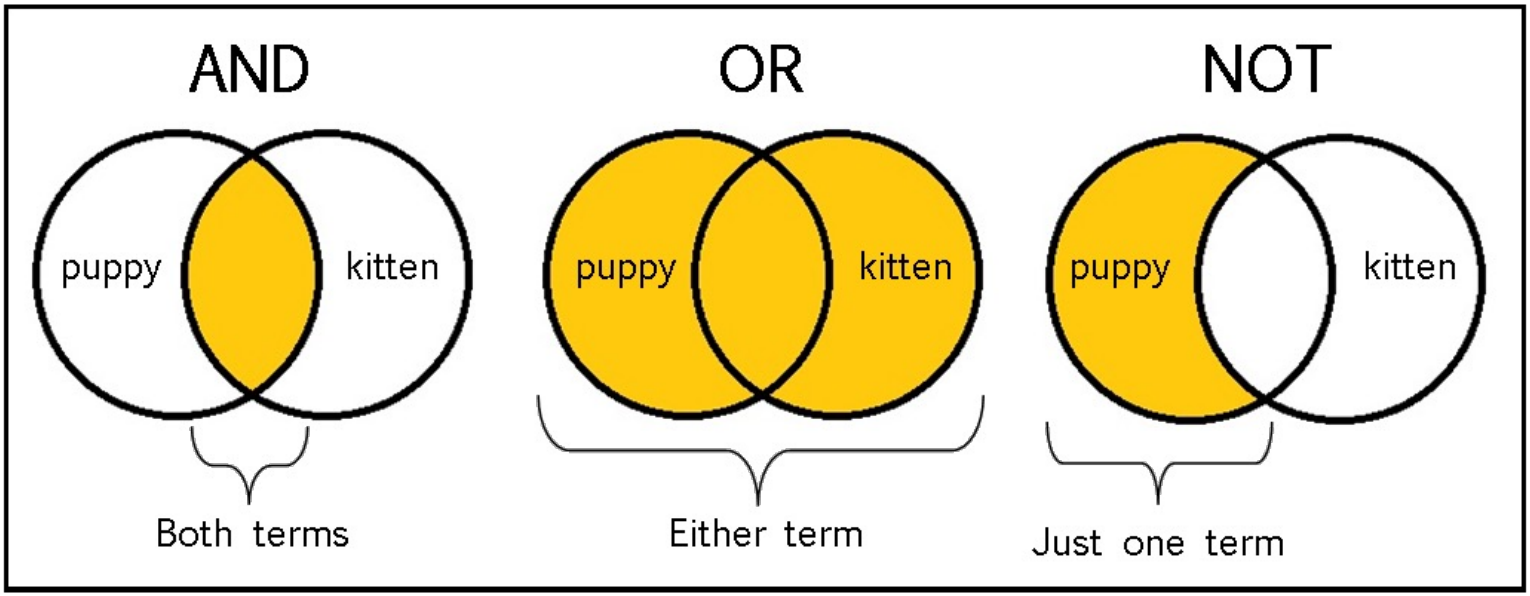
Identifying keywords

- Start with reading introductory texts which help you undertandig the topic (orientation)
  - Reference sources: dictionaries, lexicons, encyclopedias, bibliographies, etc.
  - Handbooks, monographs
  - Magazines, articles with practical knowledge
  - Use relible websites such us educational institutions, governmental organizations
- Discuss the topic with your professor or teacher

- Collect special keywords, phrases and expressions which are typical for the topic
- Think about relationships existing between the special terms
- Classify synonyms in separate groups
- Establish logical relationships between the groups

- Don’t forget:
- Boolean operators form the basis of mathematical sets and database logic
- They connect your seach words together to either narrow or broaden your set of results
- The three basic boolean operators are: **AND**, **OR**, and **NOT**.
- Use **AND** in a search to **narrow your results**
- Use **OR** in a search to connect two or more similar concepts (synonyms) broaden your results
- Use **NOT** in a search to exclude words from your search

Boolean operators



Proximity operator

Proximity operator	Example
W/*n*	Indicates distance between words, but not the order — e.g., `journal W/2 publishing`, where *journal* can be found within a distance of two words from *publishing*
Pre/*n*	Terms must appear in a specific order between words — e.g., `behavioral PRE/3 disturbances`, where *behavioral* precedes *disturbances* within three words

Wildcards

? question mark: exactly one character

The asterisk

***** Represents any group of characters, including no character.

SEARCHING LITERATURE

Simple search

If you are looking for a few sources on a topic, focus your research by typing the most relevant search terms or phrases in databases and catalogues.

- ✓ Identify concepts and combine them with AND
- ✓ Put short phrases or multiple search terms within double quotes

Example:

“Climate change” AND “food security” AND policy

Searching literature

Systematic search

If you want to efficiently find all relevant publications on your topic, you need to systematically search in databases like **Scopus** or **Web of Science**.

- ✓ Identify concepts and relevant search terms, including synonyms
- ✓ Combine concepts and terms with the operators AND/OR
- ✓ Use wildcards like * to find word variations
- ✓ Limit your search to title, abstract and keywords
- ✓ Adapt and repeat your search in more databases
- ✓ Check the Help for database specific tools

Searching literature

Following a thread

With this method you start with highly relevant publications. The reference list of these publications leads you to more relevant/older publications on your topic. If you look up these references in Scopus, Web of Science or Google Scholar, you will also find more recent papers that cite this publication.

in Hungarian we call it: snowball effect ☺

Citation and reference

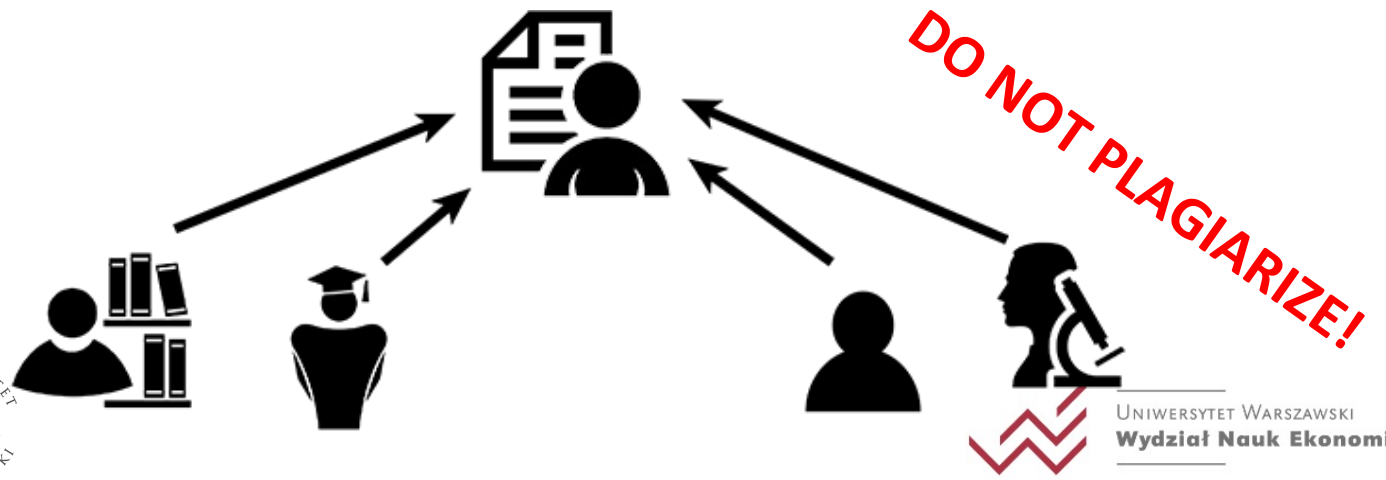
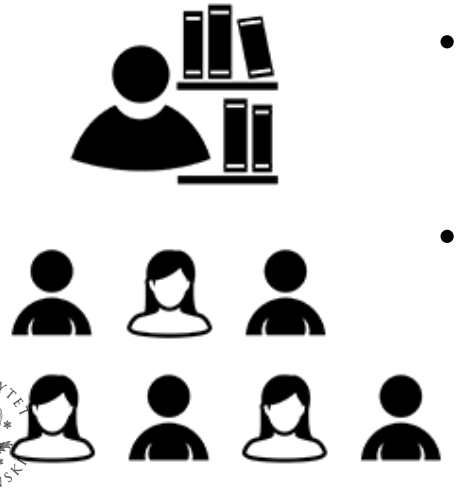
WHAT ARE CITATIONS?

Citations:

- indicate which ideas are taken from others
- from whom those ideas were taken
- give credit where credit is due
- allow researchers to find, read, and comment on each others' sources



WHY ARE CITATIONS IMPORTANT?



Authors use citations for many important reasons:

- to show how their arguments or theses are built upon the ideas of others
- to give readers the opportunity to look up the authors' sources for further inquiry
- to indicate well-rounded and well-researched scholarship

Citation and reference

WHAT DOES A CITATION LOOK LIKE?

A citation is typically found in two places:

In-Text Citations

1.2.2. Procrastination

In addition to mood management motivations for viewing online cat-related media, news accounts suggests that many people watch cat videos online to avoid work or unpleasant tasks (FlorCruz, 2013; Garber, 2012). While online cat media is generally humorous or adorable, it may bring with it hedonic pleasures but little educational or utilitarian gains. Research on general motivations for media use also points to procrastination as a reason why individuals watch entertainment media. To procrastinate is

Citation and reference

IN-TEXT CITATIONS

Authors use in-text citations after they have paraphrased, summarized, quoted or otherwise used another author's work.

Examples of in-text citations include parentheses, footnotes or endnotes.

behaviours, and reduced trainability (due to either cognitive deficits or an inability to relate properly to humans). Other unusual aspects of their behaviour, including exceptionally low levels of aggression, chasing small animals, energy and excitability (reactivity), and increased touch sensitivity, fear of stairs, and house-soiling, could also be plausibly attributed to lack of relevant environmental experience during appropriate sensitive periods in early development (Serpell and Jagoe, 1995).

The advent of American EBT regimes has generated a large, cross-disciplinary body of scholarship, much of which followed publication of the Gore Report.[3] These writings explore a range of themes, such as factors influencing Supplemental Nutrition Assistance Program (SNAP) caseloads,[4] assessment methodologies,[5] the impact of rule changes following enactment of the Personal Responsibility and Work Opportunity Act

3. *See* Albert Gore, From Red Tape to Results: Creating a Government That Works Better & Costs Less (1993) [hereinafter The Gore Report].

Citation and reference

REFERENCE LISTS

A reference list includes information on all of the sources an author used. It can also be called a bibliography or works cited. Each item in the list includes information such as title, author and publication date. A reference list is usually listed at the end of a paper with the exception of footnotes which are at the bottom of each page.

Citation and reference

READING A CITATION

Knowing how to read a citation in a reference list or bibliography will help you identify different types of sources that an author used in their research.

You can use a reference list from another researcher to find related sources on your topic, or to find counterpoints to your research.

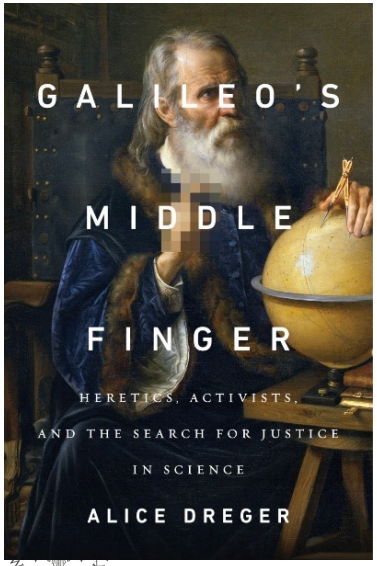
☺ SNOWBALL EFFECT = we roll reference lists, like a ball

Wydział Nauk Ekonomicznych

Citation and reference

CITATION STYLES

Different disciplines cite in different ways which means that there are many different citation styles.
Your professor or department will tell you what style to use.



Note how the same information is available, just in a different order.

MLA Style:
Dreger, Alice. *Galileo's Middle Finger: Heretics, Activists, and the Search for Justice in Science.* New York: Penguin. 2015. Print.

APA Style:
Dreger, A. (2015) *Galileo's Middle Finger: Heretics, activists, and the search for justice in science.* New York, NY: Penguin.

Citation management

WHAT IS A CITATION MANAGER?

Citation managers are used to organize citation information and notes. A citation manager is a software tool.

They allow you to:

- import and organize citation information from article indexes and other sources,
- export your citations into Word documents or other types of publications, save pdfs and other documents,
- format citations for your papers and bibliographies using APA and many other styles, and
- include your own notes.
